

Cloud Email Archiving

Keep your corporate email archived, immutable and always available for compliance, regulations and for both internal and external audits

Easy access to multiple email searches from anyone inside and outside organizations

Email archiving fulfils a variety of key business requirements, including **legal discovery readiness, regulatory compliance and email storage optimization within organizations**. To be prepared for legal discovery and regulatory events, companies must know where data is stored and be able to collect, search, and retrieve that data in a short period of time. Organizations must also have the ability to enforce policies that comply with specific regulatory and geographic requirements, and that adhere to internal information governance objectives.

Cloud Email Archiving brings a **centralized, searchable repository** that provides end users with access to historical information. Additionally, an information

archive should address all of these requirements while also supporting the IT objective of reducing the cost and management complexities of exploding data volumes, both within managed systems as well as in systems outside the direct control of IT.

Comply with legal standard regulations

Cloud Email Archiving provides a comprehensive role-based access for administrators and auditors and audits logs for clear visibility into search activity built to support compliance with PCI DSS, HIPAA, FINRA and GDPR regulations. With Cloud Email Archiving messages are preserved for litigation and investigation purposes while reports allow businesses to search across the actions carried out by the organization's users.

Secure archive "Made in Europe"

At Spamina we take end user privacy very seriously, deploying our datacenters that manage critical information where

geographically our customer's data privacy is legally protected from third parties.

Administrator & End User Consoles

Spamina delivers one, unified console to allow administrators to manage email archiving globally. Easily manage different domains, run audits and instantly drill down information per user. The administrator will be able to see the organization corporate email footprint and monitor any email accessed within the global archive.

Traffic report by user

CEA customers can create and download a new report (CSV) that summarize the archived activity per user. Report includes information such as: total number of emails sent and received, volume by kilobytes, ranking of emails sent to top 10 recipients (ie, the most exchanged messages between users). These reports are managed by administrators, who can set up automatically report from a daily or weekly basis.

Easy to use with instant results

With an intuitive web user interface for advanced search and policy configuration, Cloud Email Archiving - is extremely easy to manage. With an always-on cloud archive, Spamina Cloud Email Archiving has been

developed to provide near real-time organization-wide search. Everything about the architecture of our archiving technology has been designed for a user friendly interface that is easy to use and offers instant results. CEA enables attachment content indexing and email export to most common standard formats.

Outlook interface available

Cloud Email Archiving users can access their email archiving panel directly from the Outlook interface via the plug-in developed for the 2007, 2010, 2013 and 2016 versions. The Cloud Email Archiving Outlook Add-in is a multipurpose tool that provides Outlook users with a convenient way to easy access multiple searches and recovers archived e-mail messages.

Cloud Email Archiving is now integrated in the New Spamina App

Spamina provides an intuitive and friendly interface access to corporate email archiving, through the new App, available for iOS and Android devices. Users of Cloud Email Archiving can now search and recover emails & instant chat conversations by different criteria, such as date, email content, sender or recipient.

Optional email filtering integration

Cloud Email Archiving allows for optional Cloud Email Firewall (CEF) and Cloud Email Encryption & DLP (CEE&DLP) integration. Spamina CEF and CEE & DLP solutions are fully integrated within the same consoles and provide a single point of access for administrators and users to manage the Email antispam and antimalware security as well as their Encryption and DLP policies.

Cloud Email Archiving Benefits

Cloud Email Archiving Service Platform
